Agricultural Groundwater Monitoring Program

Apple Creek Aquifer

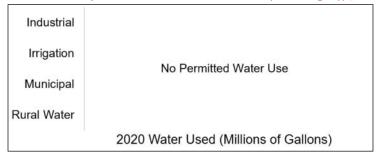

Burleigh County

Aquifer At-a-Glance			
Area	39.3 square miles		
Aquifer Type	Unconfined and Confined Surficial		
Major Land Uses over Aquifer	Grassland/Pasture (49%)		
(percentage of aquifer area covered in 2017) ¹	Crops (32%)		
Depth to Water* 2	5-20 feet		
Total Unique Wells Sampled	12		
Wells Sampled in 2021	2		
Samples Collected in 2021	4		
Years Sampled	1996, 2001, 2006, 2011, 2016, 2021		

- *Depths to water may vary seasonally, year to year, and across the aquifer
- Aquifer materials consist of sands and gravels that were deposited by streams moving meltwater away from glaciers during the last ice age. In general, the lower part of the aquifer is gravel and the upper part is sand.²
- The aquifer ranges from 10 to over 100 feet thick.²
- Domestic and stock wells are common in the aquifer.
 Several irrigation wells are also installed in the aquifer.
- In North Dakota, permits are required to withdraw large quantities of groundwater. In 2020, no permitted water was drawn from the aquifer. For more information on water use and permits, contact the North Dakota Department of Water Resources (dwr.nd.gov).

2020 Apple Creek aquifer permitted water use (from North Dakota Department of Water Resources (dwr.nd.gov))↓

About the Agricultural Groundwater Monitoring Program

- The North Dakota Department of Environmental Quality monitors a network of wells in approximately 50 surficial aquifers that are at elevated risk of agricultural contamination.
- Aquifers are sampled on a 5-year rotation.
- Monitoring began in 1992.
- The vast majority of these aquifers are located in central and eastern North Dakota.
- Water is tested for 21 general chemistry parameters, eight trace metals, and 64 pesticides.

Water Chemistry

Is Aquifer Water High in...?

	Analyte	Result	2021 Median Concentration	Potential Effects	
	Arsenic	NO	< 0.005 mg/L	Skin or circulatory system damage, increased cancer risk	
r	Iron	YES	0.40 mg/L	Metallic taste/odor, discoloration of surfaces	
	Manganese	YES	0.18 mg/L		
?	Sodium	YES	268 mg/L	Taste, people with certain health conditions may need to limit inta	
	Sulfate	YES	378 mg/L	Taste/odor, laxative effect for people not used to the water	
	For more information about Maximum Contaminant Levels (MCLs), health effects, and treatment entires for those contaminants and more				

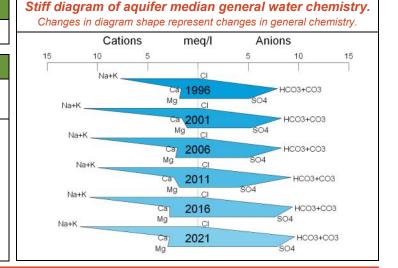

For more information about Maximum Contaminant Levels (MCLs), health effects, and treatment options for these contaminants and more, see the NDDEQ's fact sheets (deq.nd.gov/wq/1_Groundwater) or visit the US EPA website (epa.gov/ground-water-and-drinking-water).

Dominant Water Type	Water Hardness
Sodium-Bicarbonate	Very Hard

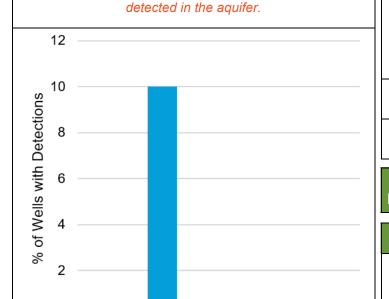

Nitrate

Percentage of Wells Exceeding the Nitrate Maximum Contaminant Level (MCL)* (10 mg/L as N).

No Nitrate MCL Exceedances

Pesticides

2.4-D

■1996 ■2001 ■2006 ■2011 ■2016 ■2021

Percentage of wells with detections of each pesticide

State Pesticide Management Plan

Agricultural Groundwater Monitoring Program aquifers are monitored as a part of the State Pesticide Management Plan. A Prevention Action Level (PAL) threshold of 25% of the pesticide's Maximum Contaminant Level (MCL)* or Health Advisory Level (HAL) is used to identify whether action is needed to prevent further contamination.

Prevention Action Level Exceedances	None
MCL or HAL Exceedances	None

Number of Unique Wells with Pesticide Detections since 1996

1 of 12 Total Wells

ctions since 1996

2021 Pesticide Detections

No Pesticide Detections

*Note that MCLs are for public drinking water systems; private wells are not regulated in North Dakota. MCLs still provide guidelines for drinking groundwater.
